

## Using Math to solve problems.

2nd Class had a problem to solve! Mrs. Dunwoody wants to order netting for the raised beds in our garden but didn't know how much to order!!

2nd class have been learning about length in maths so they used their knowledge to measure the length and width of the raised beds.

They then asked Ms. Kavanagh's 5th and 6th class to use their measurements to calculate the area of the beds and determine the quantity of netting needed. Great co-operation between both classes to solve the problem.
